Schedule of Rates

Drill Pad Preparation and Miscellaneous Earthworks Services

A long standing service to BHP Billiton

Carey Mining has been providing Civil services to BHP Billiton since 2008; the core task being the construction of drill pads and maintenance of access tracks for the exploration drillers at both BHP Billiton Central and Northern Pilbara hubs. In addition, Carey has provided civil infrastructure services at BHP Billiton's Central and Northern Pilbara hubs.

Works include:

- Drill Pad and Road construction
- Post Drilling Site Rehabilitation
- Exploration Access Road construction
- Stockyard Construction
- Turkeys Nest Construction

Due to the remoteness and the nature of the very steep terrain, Carey has had to implement robust safety systems in addition to engaging highly skilled operators and experienced supervision in order to complete the work.

On the back of the successful work completed in the Central and Northern Pilbara hubs, Carey obtained several additional work opportunities with BHP Billiton.
